PROFILE

DevOps engineer and full stack developer, project lead for DevOps & QA, where application security has become the core of the role: code audits and authorized penetration testing of business applications, delivering replayable proof-of-concept evidence and surgical fixes. Google Cloud Certified Associate Cloud Engineer. Specialized in containerized ecosystems, CI/CD pipelines, and securing PHP/Laravel and JavaScript applications in production.

TECHNICAL SKILLS

Security:	Authorized web penetration testing, OWASP Top 10, Object-level access control, Burp Suite, Semgrep, Security code review, Replayable PoC harnesses	Frontend:	React, Vue 3, Next.js, Nuxt.js, Tailwind CSS, TypeScript
Backend:	Node.js, NestJS, Express, PHP 5.6-8.2, Laravel, CodeIgniter 2/3, Lumen, GraphQL, Prisma	DevOps & CI/CD:	Docker, Docker Compose, Kubernetes, Nginx, GitLab CI, GitHub Actions, Jenkins, Ansible, Bash, Tailscale
Cloud & Platforms:	Google Cloud Platform (ACE), AWS (EC2, S3), Vercel, Supabase	Databases:	PostgreSQL, MariaDB, MySQL, Redis, MinIO
Testing & QA:	Cypress, Faker.js, SonarQube	Languages:	JavaScript, TypeScript, PHP, Python, Java, Bash, GDScript

PROFESSIONAL EXPERIENCE

Project Lead — DevOps, QA & Application Security

Dec 2024 - Present

MANAO Group - SIDINA

- Ran authorized security audits and penetration tests against business web applications and APIs: code review, exploitation in isolated environments on test data, severity-ranked reporting and proposed fixes
- Qualified access-control vulnerabilities escalated from client support: reproduced the issue, traced it to its root cause in code, and fixed the authorization layer rather than the symptom in the UI
- Adversarial review of technical solution documents before implementation (session handling, real-time revocation), verified against the deployment branches
- Designed an isolated per-developer test environment: 8 slots, 4 descriptor-driven applications, versioned reference datasets, web dashboard
- Hardened a self-hosted automation platform: access restricted to a private mesh network, secrets removed from version control, encrypted daily backups
- Led and coordinated the DevOps and QA teams, overseeing project delivery, tooling strategy, and quality standards
- Architected an interconnected Docker platform ecosystem with shared networking across 5+ microservices; containerized legacy PHP 5.6/7.4 CodeIgniter apps with GHCR CI/CD
- Built 'ocompose' — a reproducible Docker mini-OS platform with CLI + Web UI — and 'DB Docker Server', a multi-engine database manager with React Web UI and SSE real-time logs
- Created comprehensive Cypress E2E test suites for Paie and Compta with auto-generated test data via Faker.js

FullStack JavaScript Developer

Aug - Nov 2024

MAR IT Consulting

- Built secure, scalable web applications using Vue3, Nuxt.js, Node.js, and Supabase
- Developed and integrated dynamic role-based access control (RBAC) systems
- Utilized OCR technologies to extract structured data from invoices

Back-End Node.js Developer

Jan 2024

OnlyTravaux

- Contributed to backend development using Node.js and GraphQL
- Implemented API endpoints to support front-end requirements

DevOps Intern

Oct - Dec 2023

OpenData Madagascar

- Implemented CI/CD pipeline using Jenkins for automated Node.js API deployment
- Streamlined development workflow and deployment processes

Network Administrator Intern

Oct - Dec 2022

ESD

- Implemented captive portal solution with dedicated application
- Managed network infrastructure and security

EDUCATION

Master's Degree in Computer Science

2025

École Nationale d'Informatique

Thesis on Microservices Architecture — 19.75/20. Summa Cum Laude.

Bachelor of Computer Science

2023

École Nationale d'Informatique

Highest honors for thesis on CI/CD of a Node.js API with Jenkins.

CERTIFICATIONS

Google Cloud Associate Cloud Engineer (ACE)

Google Cloud Platform — October 2024

LANGUAGES

French Native **English** Professional **Malagasy** Native

PERSONAL PROJECTS

Road to sudo — Educational game teaching Linux through a simulated terminal: virtual filesystem, 74 commands, 64 challenges across 14 levels validated against machine state rather than typed strings. Released as Linux and Windows binaries
[Godot 4.4](#), [GDScript](#), [GitHub Actions](#)

AKD-MI — Full-stack institution directory platform with GPS mapping, RBAC, and GraphQL API
[Next.js](#), [NestJS](#), [GraphQL](#), [Prisma](#), [PostgreSQL](#), [Docker](#)

ASSBEP Health Platform — Multilingual health platform with admin backoffice, REST API, and CI/CD to AWS EC2
[Vue 3](#), [NestJS](#), [Prisma](#), [PostgreSQL](#), [MinIO](#), [Docker](#), [GitHub Actions](#)

DB Docker Server — Multi-engine database manager (MariaDB, MySQL, PostgreSQL) with React Web UI, SSE real-time logs, and MinIO backup sync
[Node.js](#), [React](#), [Vite](#), [Docker Compose](#), [Bash](#), [PostgreSQL](#), [MinIO](#)

Konnect IDP/SSO — Identity Provider implementing OAuth 2.0, OpenID Connect, and TOTP-based MFA
[Node.js](#), [Express](#), [MySQL](#), [JWT](#), [OAuth 2.0](#), [Docker](#)

ocompose — Reproducible Docker platform with CLI + Web UI for multi-instance dev environments
[Bash](#), [Docker Compose](#), [Nginx](#), [PHP-FPM](#), [Node.js](#), [Python](#)
